Skilled Sapiens AI Operations: Demo and Pilot

Automate the glue, protect the mentor

Prepared for	The Skilled Sapiens leadership team
Prepared by	Subhranil Hazra, IIM Lucknow · Live Project 1, Certified Product Manager (Product & Brand Management)
Version	v1 for review · 28 October 2026
Based on	The Live Project 1 report, *AI Product Strategy for Operational Optimization at Skilled Sapiens* (its wireframes are slides 19–26)
Companion	A clickable demo website of the six products, with eight personas sharing one learner record. It runs in any browser with no login, and uses sample data only.

Contents

1. Summary
2. Goals and non-goals
3. Personas
4. Scope
5. User stories and acceptance criteria
6. Key flow
7. Wireframes
8. Rules the product must follow
9. The learner record
10. What the demo simulates
11. Metrics
12. Delivery plan and next steps
13. Risks and open questions
14. Decisions requested

1 Summary

Problem. Skilled Sapiens sells mentor time at low prices. Around every mentor hour sits manual work spread across about nine tools: WhatsApp, four inboxes, Razorpay pages, the LMS, Zoom, Drive and others. Public promises (24×7 mentor access, a mentor within 7 days, a certificate 3–4 days after evaluation) are kept by people remembering to keep them. The root cause: **nobody owns the learner's record.**

Solution. First build one learner record (a CRM) and one knowledge base (One Source). Then add six AI-assisted products: **Ask Sapiens**, **Review Desk**, **One Funnel**, **Mentor Match**, **One Source** and **Session recaps**. AI drafts; people decide.

> **This PRD covers two things:**
>
> 1. **The demo:** a clickable website that lets the Skilled Sapiens team try the pilot before any tool is bought.
> 2. **What the one-cohort pilot needs**, so each demo screen maps onto the real setup.

2 Goals and non-goals

Demo goals

- Show the full pilot journey across 8 personas in under 10 minutes, using the guided demo.
- Let the Skilled Sapiens team try every screen and say what should change.
- Settle the open questions (section 13) before tool set-up.

Non-goals

- No real AI calls, learner data, logins or backend in the demo.
- AI never gives a final grade, confirms a mentor, or decides a refund or extension.
- No custom model training. The plan buys tools; it doesn't build them.

Pilot goals (Day 30, one Product & Brand Manager cohort)

Goal	Target
Questions resolved without a person	≥ 40%
AI–evaluator grade agreement	≥ 85%
Submission to certificate	≤ 72 h
Learner satisfaction (CSAT)	≥ 4.3 / 5

3 Personas

Persona (demo name)	Who	Job to be done	Screens
Ananya, prospect	Student who joined a free workshop	Find the right program without waiting	L1 WhatsApp qualifier
Ananya, learner	Enrolled live-project learner	Know where I stand, get answers fast, get my certificate on time	L2 Home · L3 Recaps · L4 Ask Sapiens · L5 Project
Riya, counselor	Admissions and sales	Call every good lead within 15 minutes	S1 Lead pipeline
Vikram, program manager	Runs cohorts	Match a mentor within 48 hours; publish recaps	S2 Mentor Match, recap check
Neel, coordinator	Learner support	Handle only what the AI can't	S3 Support inbox
Kavya, evaluator	Grades reports	Grade fairly in less time	S4 Review Desk
Farah, knowledge owner	Keeps policies right	One correct answer, everywhere	S5 One Source
Founder	Leadership	See whether promises are kept and at what cost	M1 Dashboard

4 Scope

Product	What it does	Screens	Demo v1	Pilot
One Funnel	Every lead in one CRM, qualified on WhatsApp, with a 15-minute first-contact clock	L1, S1	Must	Live from month 1

Mentor Match	AI learner brief and ranked mentors; a person confirms	S2	Must	Month 4
Ask Sapiens	Answers from One Source and the learner record; hands off the rest	L4, S3	Must	Live (process questions)
Session recaps	AI recap of each weekly review; a person publishes it	L3, S2	Must	Live
Review Desk	AI rubric draft and feedback; a person approves; certificate issued on approval	S4, L5	Must	Shadow mode first
One Source	Pages with owners and review dates; approved facts sheet; queue of unanswered questions	S5	Must	Live (prerequisite)
Dashboard	Promises kept, hours saved, live queues, pilot scorecard	M1	Must	Weekly view
Later items	Lead scoring, ops analytics copilot, B2B desk for colleges	none	Won't (v1)	Month 6 and later

5 User stories and acceptance criteria

#	As a...	I want to...	Done when (acceptance criteria)	Screen
1	prospect	answer three questions by tapping	Consent is asked first; "No" ends the chat; three answers create a CRM lead with a fit tier	L1
2	counselor	see every lead on one board	Leads from all sources appear; uncontacted leads show a timer that turns red after 15 min	S1
3	counselor	enroll a lead	"Mark paid and enrolled" creates the learner record and adds the learner to the mentor queue	S1
4	program manager	match a mentor quickly	Queue sorted by wait; the brief and the top 3 mentors show, with reasons; nothing happens until I confirm	S2
5	learner	see where I stand	Home shows my progress, next session, each promise and its status, and my latest recap	L2, L3
6	learner	ask anything, any time	Questions about my record are answered from the record; others only from in-date One Source pages, naming the source	L4
7	learner	reach a person when it matters	Refunds, extensions, complaints and unknown questions are handed off with a summary and a suggested reply	L4
8	coordinator	clear hand-offs fast	I can edit and send the suggested reply; the learner sees it in the same chat	S3
9	learner	submit my report correctly	Only .pptx or .docx files; each group member uploads from their own account; group copies are matched	L5
10	evaluator	grade with an AI first pass	The rubric shows AI scores with evidence; I can change any score and the feedback; approval issues the certificate	S4, L5
11	knowledge owner	keep answers right	Overdue pages are hidden from Ask Sapiens; answering a gap makes it available to Ask Sapiens straight away	S5

12	founder	know if the pilot works	The dashboard shows promises kept, hours saved, live queues and the scorecard with its decision rule	M1

6 Key flow: the guided demo

One sample learner, Ananya, carries the whole story. The demo's **Guided demo** panel walks through these twelve steps and can jump to any one of them.

1. Ananya qualifies on WhatsApp (L1)
2. The counselor calls and enrolls her (S1)
3. The program manager confirms her mentor (S2)
4. Ananya sees her journey on Home (L2)
5. The week 3 recap is checked and published (S2 → L3)
6. Ask Sapiens answers one question and hands off another (L4)
7. The coordinator replies (S3)
8. Ananya submits her report (L5)
9. The evaluator reviews and approves it (S4)
10. Ananya gets her certificate and feedback (L5)
11. The knowledge owner closes a gap (S5)
12. The founder checks the dashboard (M1)

Wireframes come next. The following pages are landscape. Each wireframe is the spec from the report. The numbered markers match the annotation panel on the right of each wireframe. Under each one: the stories it covers, where it lives in the demo, and what was refined when the demo was built.

7.1 Screen map and demo path

11 screens · L1–L5 learner · S1–S5 staff · M1 leadership

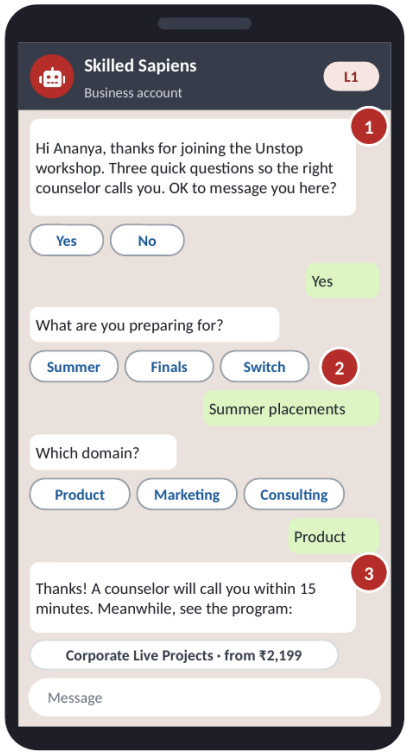

Covers: all 12 stories; this map is the site's navigation. Each persona is a tab in the persona bar; each screen code is a tab within it.

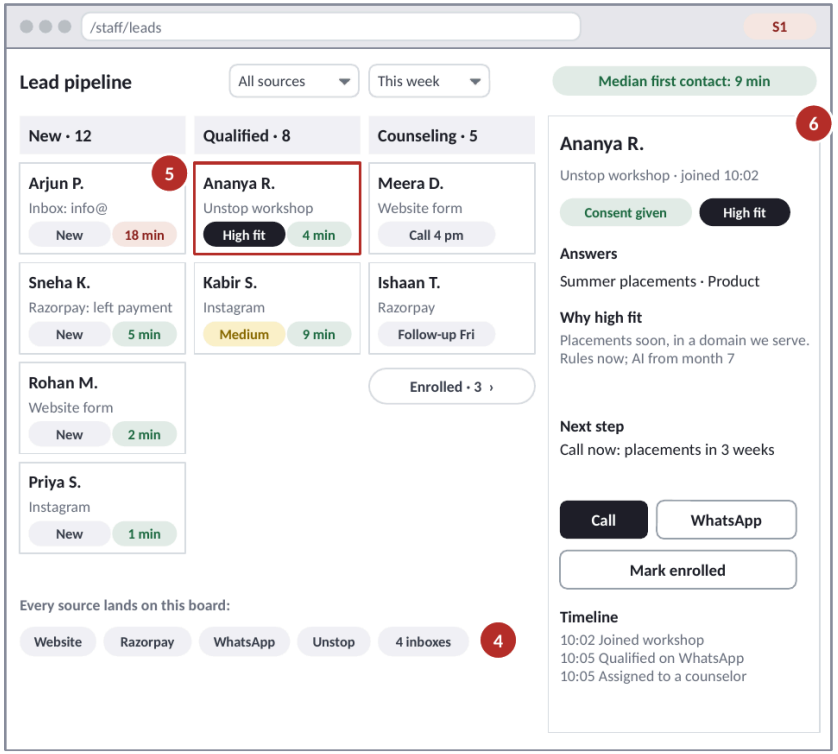

In the demo: the persona bar at the top switches between the eight people. Each screen code is a tab, and a *Guided demo* panel walks through the 12 steps.

Refined in the demo: staff personas have names (Riya, Vikram, Neel, Kavya, Farah). Badges on the persona bar count waiting work.

Wireframe: One Funnel

A workshop lead qualifies in three taps on WhatsApp and reaches the counselor's board as a high-fit lead with a 15-minute clock

What the demo must show

1. **Consent first** — Opt-in comes before any question; 'No' ends the chat
2. **Tap, don't type** — Three button questions; the answers save to the CRM
3. **A clear next step** — A call within 15 minutes, plus the right program page
4. **One board for every lead** — Website, Razorpay, WhatsApp, Unstop and the four inboxes
5. **15-minute clock** — Turns red after 15 minutes and alerts the counselor
6. **Lead drawer** — Answers, fit tier and one-tap call; AI scoring from month 7

Demo flow: Ananya joins a workshop, qualifies in three taps and lands as 'High fit'; a counselor calls her within 15 minutes.

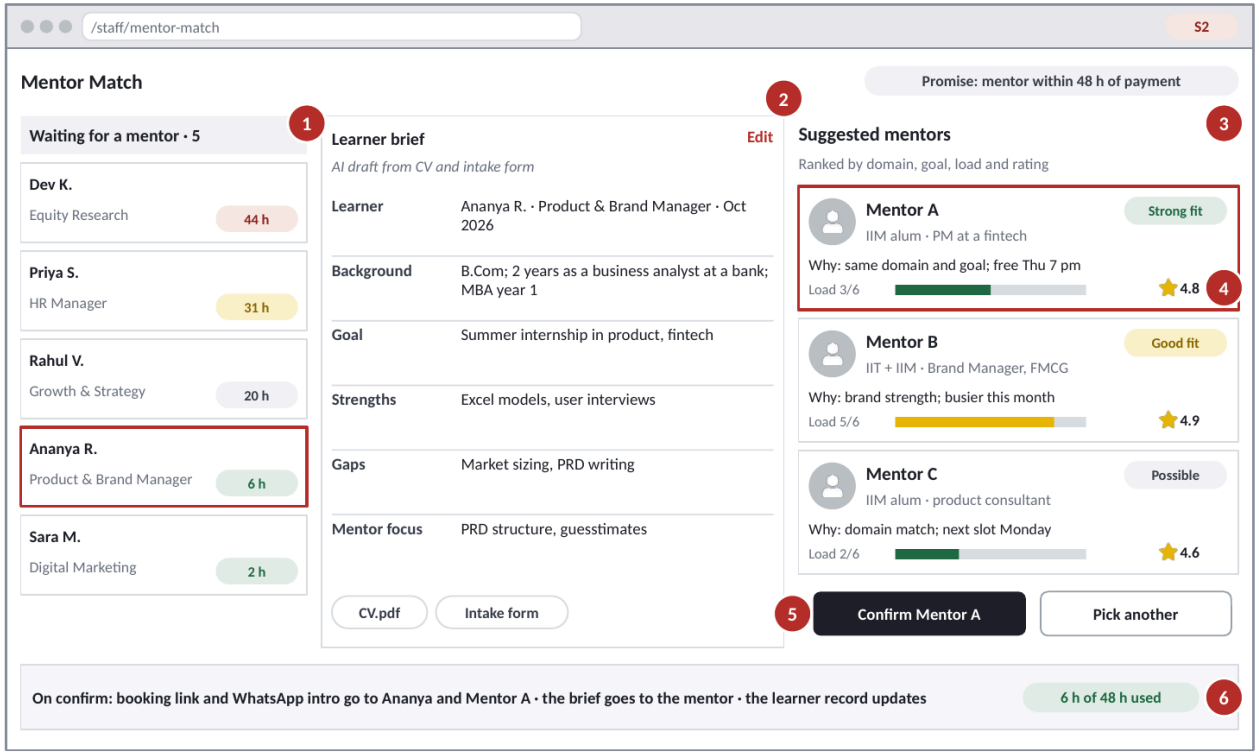

Covers: consent first; three tap-to-answer questions; one board for every source; a 15-minute clock; the lead drawer with call and enroll.

In the demo: persona *Ananya (lead on WhatsApp)* → WhatsApp qualifier; persona *Riya* → Lead pipeline.

Refined in the demo: a third question (when placements start) sets the fit tier. The timer is green up to 10 min, amber to 15, then red. Enrolling creates the learner record.

Wireframe: Mentor Match

The AI writes the learner brief and ranks mentors; the program manager confirms in one click, well inside the 48-hour promise

What the demo must show

1. **Most urgent first** — Sorted by hours since payment; amber at 24 h, red at 40 h
2. **One-page learner brief** — Drafted from the CV and intake form; the manager can edit it
3. **Ranked suggestions** — Domain, goal, load and rating, with the reason in plain words
4. **Load and rating** — Keeps the most popular mentors from being overloaded
5. **A person confirms** — No match is made without the manager's click
6. **Everything sent at once** — Booking link, intro and brief go out; the record updates

Demo flow: Ananya's brief is ready when she pays; the manager confirms Mentor A in one click, six hours in, well inside the 48-hour promise.

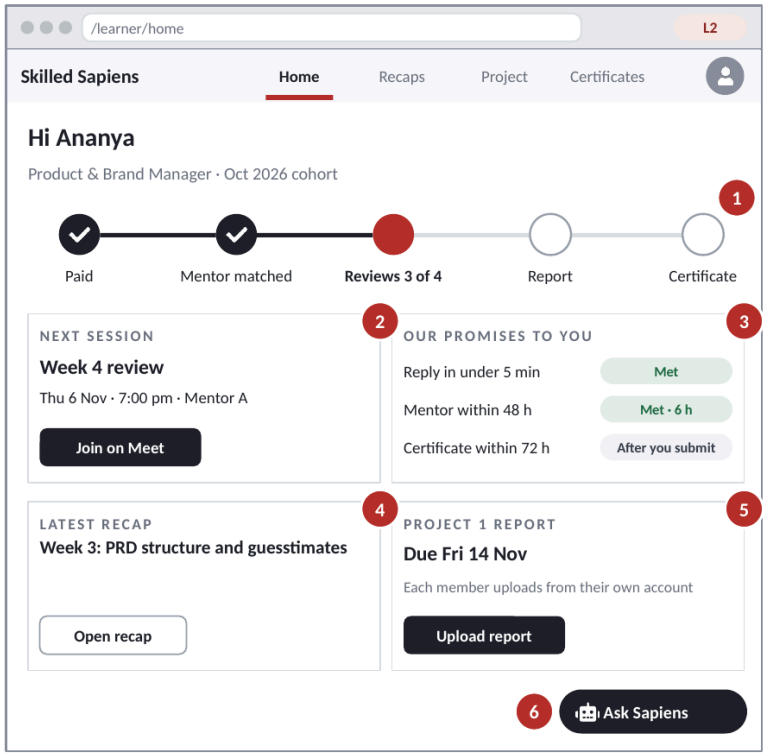

Covers: a queue sorted by hours since payment; an AI learner brief; the top 3 mentors with reasons, load and rating; confirm by a person.

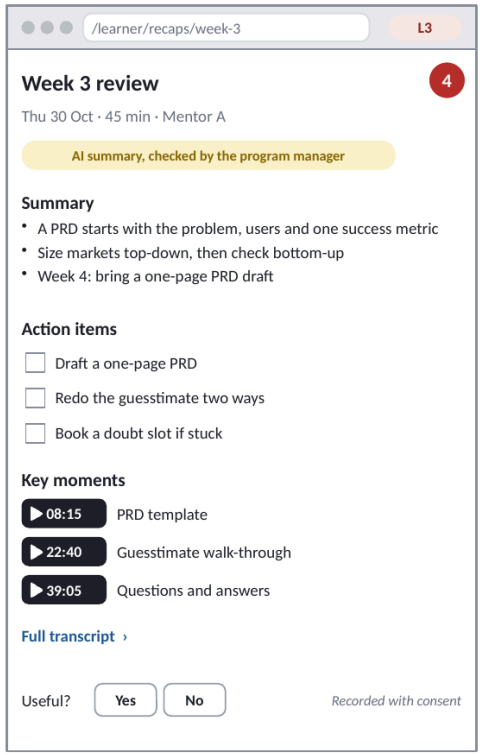

In the demo: persona *Vikram* → Mentor Match. Confirming posts an intro in Ananya's chat and updates her home page.

Refined in the demo: each suggested mentor has its own Confirm button. The "mentor focus" line in the brief can be edited in place.

Wireframe: Learner Home and Session Recap

One page tells the learner where they stand, what comes next and which promises apply; a missed session becomes a five-minute recap

What the demo must show

1. **Where I stand**
   Progress read live from the learner record
2. **What's next**
   Next session with a join link and a reminder
3. **Promises, visible**
   Each promise and whether it was met
4. **Five-minute catch-up**
   Recap, actions and time-stamped moments within 2 hours
5. **Own-account upload**
   Each group member submits from their own login
6. **Help on every page**
   Opens the same Ask Sapiens assistant as WhatsApp

Demo flow: Ananya opens her home page, sees Thursday's session and the promises that apply, and catches up on week 3 in five minutes.

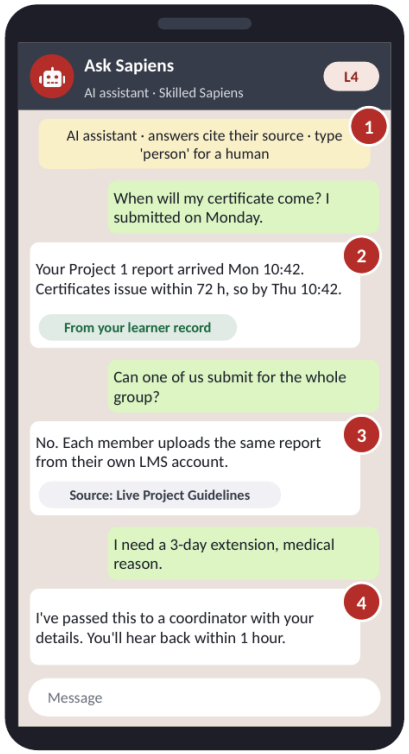

Covers: a progress stepper; next session; promises and their status; latest recap; report upload; Ask Sapiens on every page.

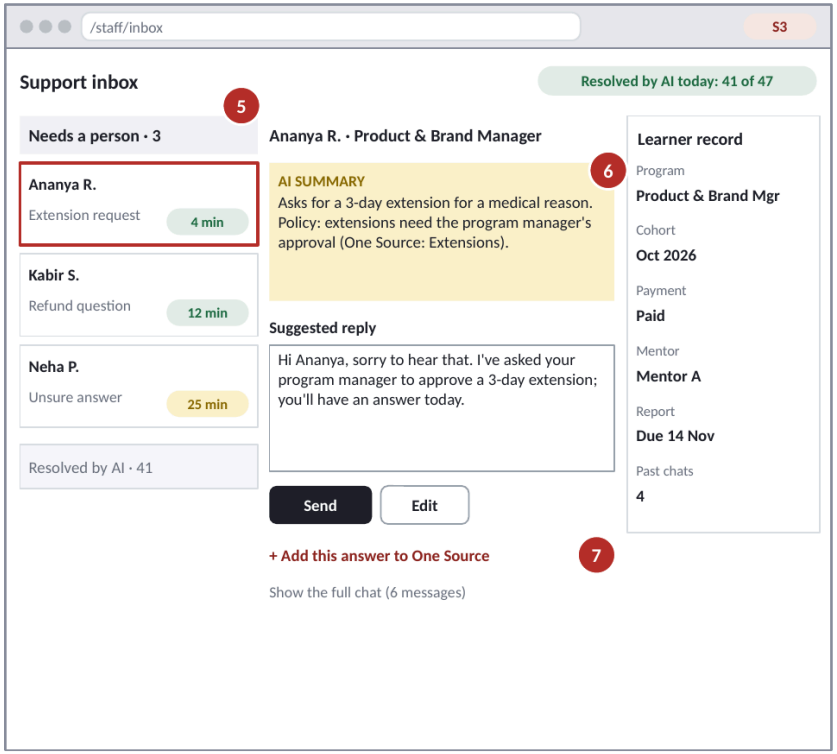

In the demo: persona *Ananya (learner)* → Home and Recaps. Recaps appear only after the program manager publishes them.

Refined in the demo: a "Skip ahead 3 weeks (demo)" control jumps to week 4. Action items can be ticked, and the "Useful?" vote feeds CSAT.

Wireframe: Ask Sapiens and the Support Inbox

Learners get a sourced answer in seconds; what the AI cannot settle reaches a coordinator with a summary and a suggested reply

What the demo must show

1. **Says it's AI** — Disclosed up front; 'person' always reaches a human
2. **Knows the learner** — Reads the record: submission, mentor, certificate
3. **Cites its source** — Answers only from One Source and names the page
4. **Hands off cleanly** — Refunds, extensions and unsure answers go to a person
5. **Queue with timers** — Sorted by wait; the promise is a reply within 1 hour
6. **Summary and reply** — The coordinator reads one paragraph and sends in one click
7. **Closes the gap** — A new answer goes into One Source for next time

Demo flow: two of Ananya's three questions are answered with sources in seconds; the extension request reaches a coordinator with a ready reply.

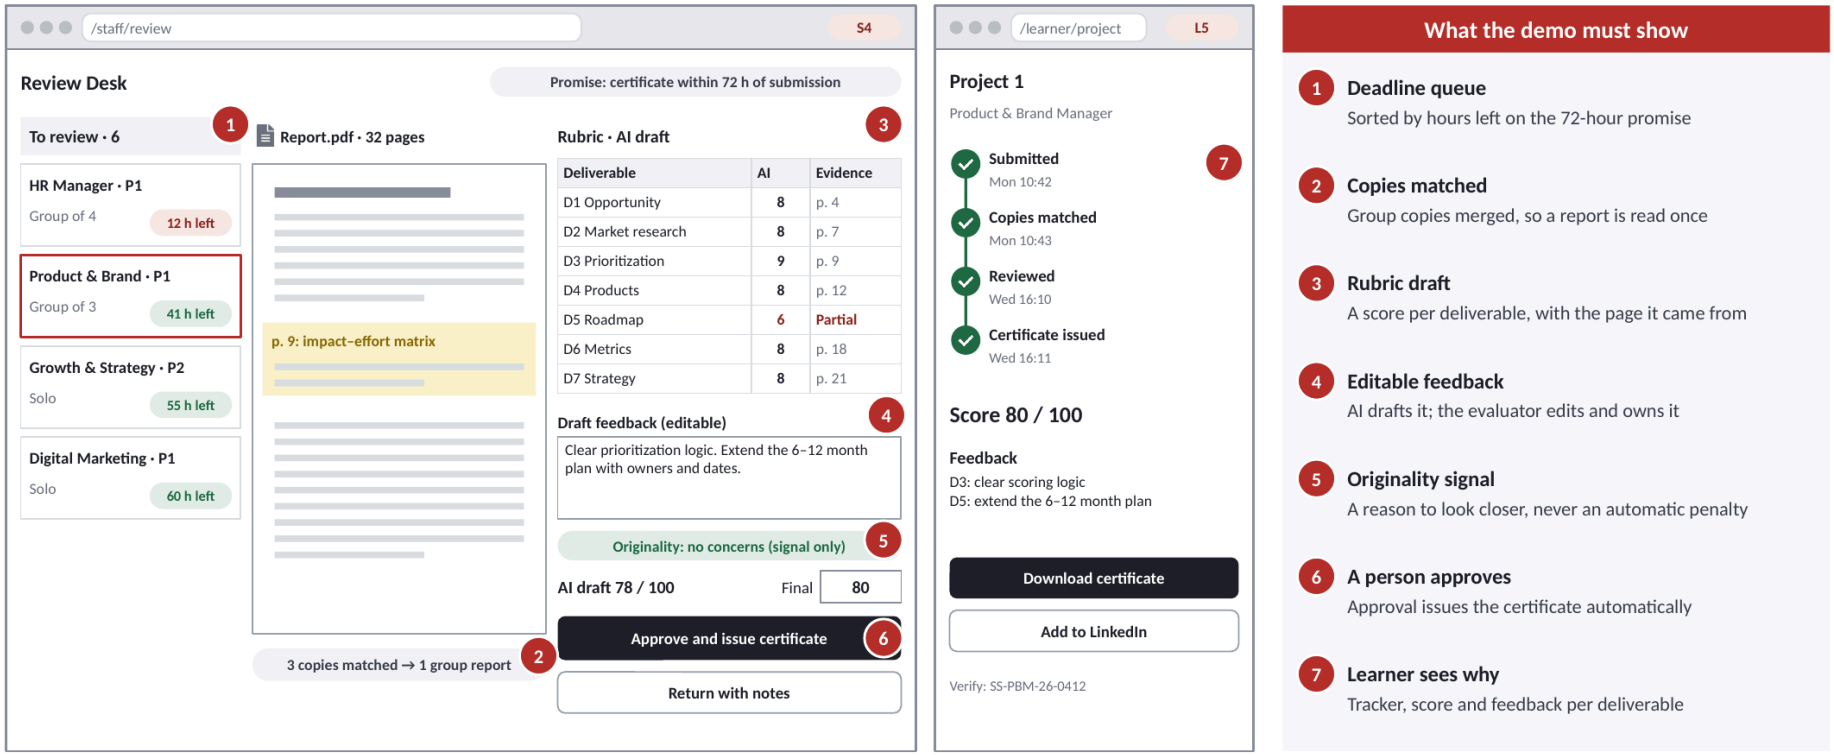

Covers: AI disclosure; answers from the record; source-only answers; clean hand-off; a queue with timers; AI summary and suggested reply; adding answers back to One Source.

In the demo: persona *Ananya* → Ask Sapiens (type or tap the suggestions); persona *Neel* → Support inbox.

Refined in the demo: "Helpful / Wrong" on each answer feeds the wrong-answer metric. Sensitive hand-offs (refunds, extensions, complaints) can't be turned into One Source answers.

Wireframe: Review Desk and the Learner's Result

The evaluator checks an AI draft against the rubric and approves; approval issues the certificate and the written feedback

Demo flow: the group report gets an AI draft, the evaluator adjusts one score and approves, and Ananya's certificate arrives two days after she submits.

Covers: a deadline queue; matched group copies; a rubric draft with evidence; editable feedback; an originality signal; approval that issues the certificate; the learner's tracker.

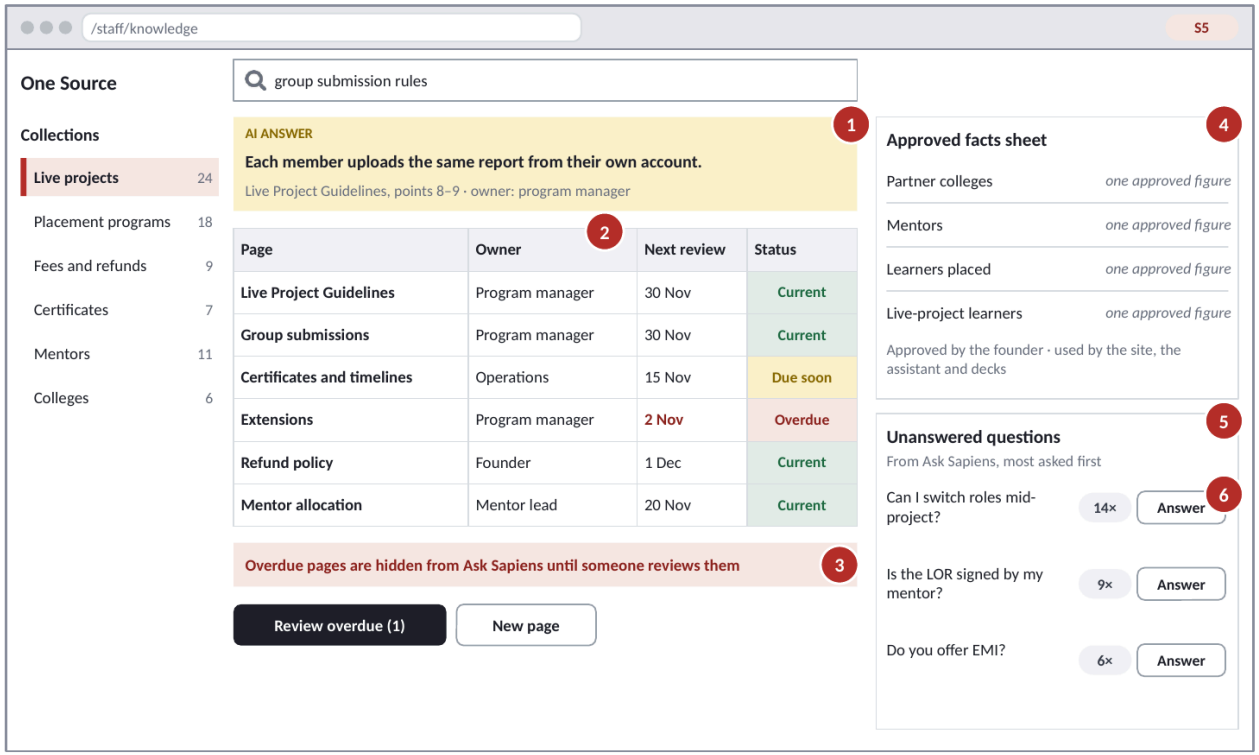

In the demo: persona *Kavya* → Review Desk; persona *Ananya* → Project (upload, tracker, certificate, Verify).

Refined in the demo: the report preview pane is replaced by an "Open report" link. Rows where the evaluator differs from the AI by more than 1 point are highlighted.

Wireframe: One Source Knowledge Base

SKILLED SAPIENS | AI OPERATIONS STRATEGY 25

Every answer, policy and public figure comes from one place, with an owner and a review date on each page

What the demo must show

1. **Ask, don't browse**
   Staff get an answer plus the page it came from
2. **One owner per page**
   Every policy has a named person who keeps it right
3. **Review dates**
   Overdue pages turn red and are hidden from the assistant
4. **Approved facts sheet**
   One set of public figures for the site, assistant and decks
5. **Gap queue**
   What learners asked that had no answer, most asked first
6. **Write once**
   A new answer is live for staff and Ask Sapiens at once

Demo flow: staff ask a rule and see the page behind it, review the overdue 'Extensions' page, then answer the most-asked open question.

Covers: AI search with its source; an owner and review date on every page; overdue pages hidden from the assistant; the approved facts sheet; the gap queue.

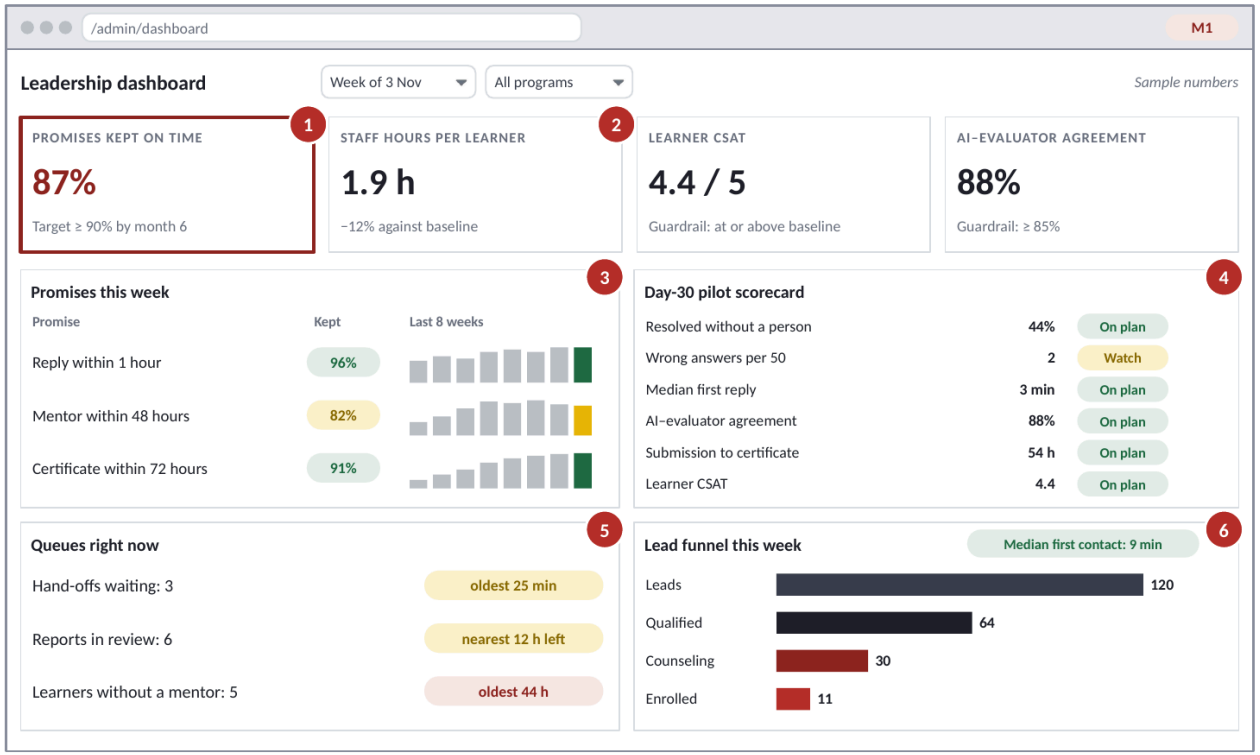

In the demo: persona *Farah* → One Source. Answering a gap makes Ask Sapiens answer that question immediately.

Refined in the demo: facts are approved in place. Pages can be edited and marked reviewed (+90 days) from the page panel.

Wireframe: Leadership Dashboard

SKILLED SAPIENS | AI OPERATIONS STRATEGY 26

One screen shows whether promises are kept, what each learner costs in staff time, and where a queue is about to break

What the demo must show

1. **North star first** — The share of learner promises kept on time
2. **Counter-metric** — Staff hours per learner, so speed isn't bought with overtime
3. **Promise trends** — Each promise against its target over eight weeks
4. **Pilot scorecard** — On plan, Watch or Act, with the decision rule on slide 29
5. **Live queues** — Where a promise is about to break, and who owns it
6. **Funnel** — Leads to enrollments, with first-contact time

Demo flow: on Monday the founder sees 87% of promises kept, the mentor queue slipping, and no pilot metric in the Act zone.

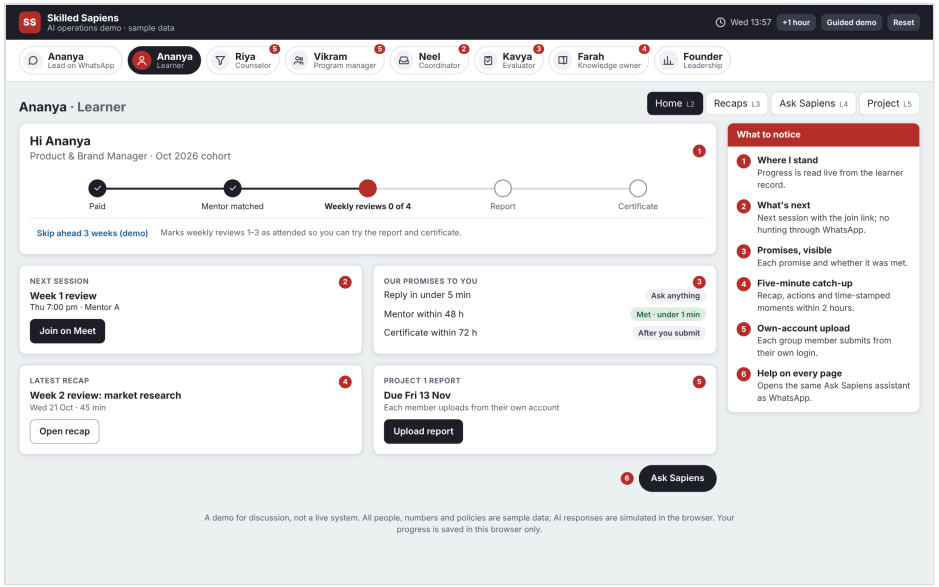

Covers: the north star (promises kept); the counter-metric; promise trends; the Day-30 scorecard with its decision rule; live queues; the funnel.

In the demo: persona *Founder* → Dashboard. Every number is computed live from what the other personas did; "+1 hour" moves the clock.

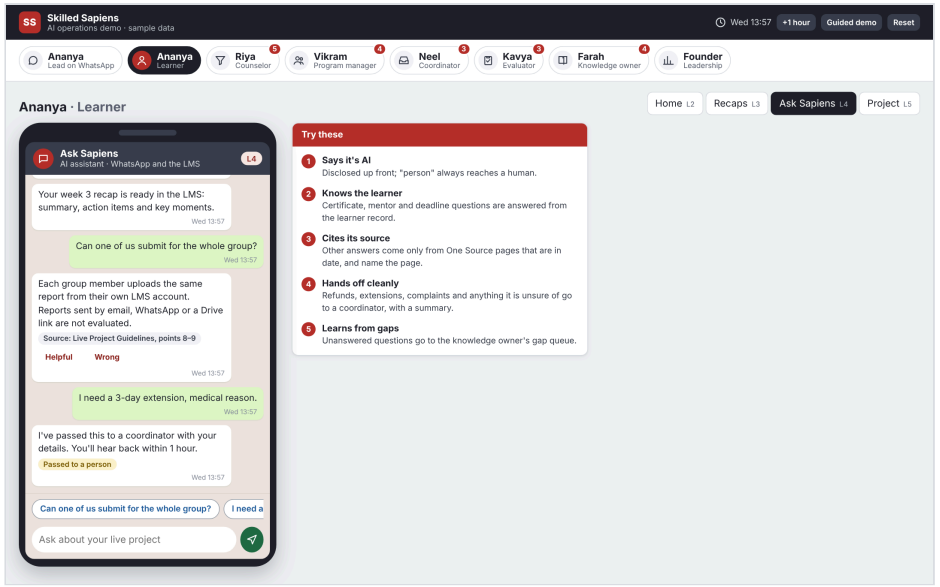

Refined in the demo: the counter-metric tile shows staff hours saved this week (and roles a year). An activity feed lists recent actions across personas.

7.9 The demo as built

L2 Learner home after mentor match

L4 Ask Sapiens: a sourced answer and a hand-off

S4 Review Desk with the AI rubric draft

M1 Dashboard with promises, scorecard and queues

8 Rules the product must follow

- **Say it's AI.** Every chat starts with a disclosure, and typing "person" always reaches a human.
- **Source-only answers.** Ask Sapiens answers only from the learner record or from One Source pages within their review date, and it names the source.
- **People decide.** Grades, mentor matches, refunds, extensions and complaints always need a person.
- **Never guess.** If unsure, hand off and log the question in the gap queue.
- **Consent.** Ask for consent on WhatsApp before any qualifying question, and record sessions only with consent (DPDP Act and Rules).
- **No Pulse data used to sell.** One Funnel uses only leads that contact Skilled Sapiens directly, consistent with the Pulse PRD.
- **One set of public figures.** The website, the assistant and decks all use the approved facts sheet.

9 The learner record: data the pilot needs

Every product reads and writes one learner record. These are the fields the CRM and One Source need from day one.

Record	Key fields
Lead	name, source, time received, stage (new / qualified / counseling / enrolled), WhatsApp answers, fit tier, consent, time of first contact
Learner	name, program and cohort, payment time, mentor and match time, learner brief, sessions attended, report due date, group members
Mentor	name, background, domains, current load and capacity, rating, available slots
Conversation	question, answer, source used, answered by (AI or person), hand-off reason, reply time, learner rating
Report	submission time, group copies, rubric scores (AI draft and final), evidence pages, feedback, originality signal, approval time, certificate ID
Recap	week, summary, action items, key moments, published by and when
Knowledge page	title, owner, next review date, approved answer; plus the queue of unanswered questions and how often each is asked

10 What the demo simulates, and what the pilot uses

In the demo (sample data)	In the pilot (the report's starter stack, ≈ ₹26,800 a month)
Ask Sapiens answers from a sample knowledge base	AiSensy WhatsApp AI Agent and an LMS chat widget, grounded on One Source
One Source pages with sample policies	Notion Business knowledge base with owners and review dates
Lead board with sample leads	Zoho CRM, with Razorpay and website forms linked through Zapier
Rubric drafts prepared in advance	An LLM (Claude API) scoring against the project rubric, under $0.10 per report
Certificate card with a Verify check	Certifier (free up to 250 certificates a year), using the existing SS-verification idea
Recap drafts prepared in advance	Google Meet notes or Fireflies, published by the program manager

Dashboard computed from the demo's activity	Looker Studio on CRM exports, reviewed weekly

The screens stay the same when a simulated part is replaced by the real tool, so what the team approves in the demo is what learners and staff will use.

11 Metrics

North star: learner promises kept on time (reply ≤ 1 h, mentor ≤ 48 h, certificate ≤ 72 h). Target ≥ 90% by month 6.

Counter-metric: staff hours per learner. Target −30% by month 12.

Guardrails: CSAT at or above baseline; grade agreement ≥ 85%; zero data incidents.

The demo's dashboard computes all six scorecard metrics live, so the team can see how each action moves them.

Day-30 metric	On plan	Watch	Act
Resolved without a person	≥ 40%	25–39%	< 25%
Wrong answers per 50	≤ 1	2–3	> 3
Median first reply	< 5 min	5–60 min	> 60 min
AI–evaluator agreement	≥ 85%	75–84%	< 75%
Submission to certificate	≤ 72 h	73–96 h	> 96 h
Learner CSAT	≥ 4.3	4.0–4.2	< 4.0

Decision rule: all on plan → scale to all 8 roles · any in Act → fix within 2 weeks · 3 or more in Act → stop and rethink.

12 Delivery plan and next steps

The plan follows the report's next 30 days, with a demo walk-through first so the team shapes the product before any tool is set up.

When	What happens	Owner at Skilled Sapiens	What we need
Week 0	45-minute walk-through of the demo; feedback captured in one document	Founder, ops lead	45 minutes of the team's time
Week 1	Six baseline numbers collected; real policies and one approved facts sheet replace the sample content in the demo and One Source	Ops lead, founder	Baseline numbers; refund, extension, LOR and EMI policies; approved public figures
Week 2	AiSensy, Zoho CRM, Zapier and Notion set up; One Source drafted with an owner for every page	Ops lead	Tool accounts; a WhatsApp Business number
Week 3	Rubric written; Review Desk tested on 20 past reports (shadow mode); consent wording agreed	Evaluation lead	20 past reports, anonymized
Week 4	Pilot starts with one Product & Brand Manager cohort	Coordinator, evaluator	Named owners for the pilot
Day 30	Scorecard review against the decision rule: scale, correct or stop	Founder	A go / no-go decision
Months 2–12	Waves 2 and 3 of the roadmap: Mentor Match and the doubt assistant from month 4; lead scoring and analytics from month 7	Product owner	Quarterly reviews

Cost of the pilot: about ₹3,200 of new tools for the month (AiSensy with the AI Agent; an LLM for about 50 reports; Certifier's free tier; Meet notes in Workspace). The full starter stack is about ₹26,800 a month: less than one additional coordinator.

13 Risks and open questions

Risk or question	Mitigation or owner
Real refund, extension, LOR and EMI policies are not yet confirmed	Skilled Sapiens confirms them in week 1; until then the demo marks them as sample
Public figures conflict (partner colleges, mentors)	The founder approves one facts sheet
Which CRM to use, and can the LMS share submission data?	Decided in the walk-through; Zoho CRM is the default
WhatsApp Business API number and consent wording	Ops lead, during AiSensy set-up
AI grades seen as unfair	Shadow mode first; a person signs every grade; agreement is tracked
Mentors feel replaced	AI takes admin only; mentors keep every session
Learners rely on a wrong answer	Source-only answers, hand-off when unsure, a weekly audit, and a "Wrong" button on every answer

14 Decisions requested from Skilled Sapiens

1. **Approve the one-cohort pilot.**
   It runs one Product & Brand Manager cycle, with the Day-30 decision rule in section 11.
2. **Share the six baseline numbers:**
   - learner questions a week
   - evaluator minutes per report
   - hours from payment to mentor
   - leads a month and their conversion
   - tools and logins in use
   - mentor admin hours a week
3. **Confirm the policies and figures.**
   Confirm the policies for refunds, extensions, LORs and EMI, and approve one set of public figures.
4. **Name three owners.**
   A pilot coordinator, an evaluation lead and a One Source owner.
5. **Try the demo and send feedback.**
   That way, the screens reflect how the team actually works before anything is set up.
